AI bookkeeper

A visual companion to the executive one-pager

SET UP ONCE

Complete these six stages for each new entity.

1. Interview + private records
Accounts, history, basis and authority

2. Verify source records
Statements + opening and month coverage

3. Zoho + legacy migration
Import missing history; verify current balances

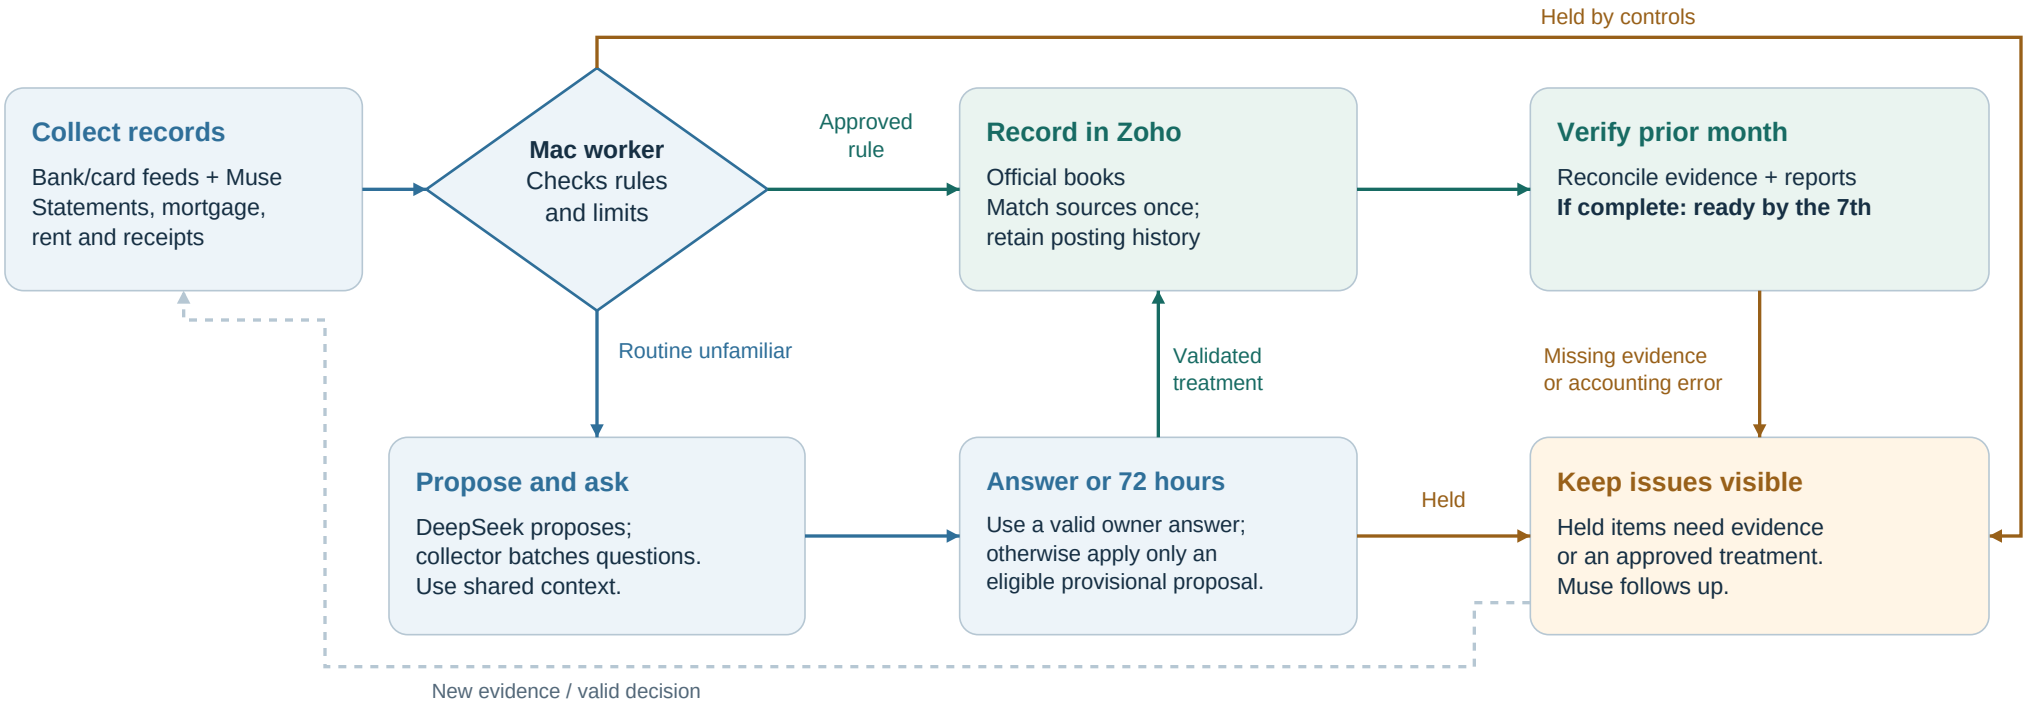
4. Prepare the worker
Mac + SQLite; Drive backup recovery

5. Prove the books
Verify one month; rerun without duplicates

6. Enable the schedule
Observe a run, backup and alert

REPEAT ON SCHEDULE

Daily processing supports a monthly goal: prior month ready by the 7th.



Controls before every posting: over-limit items without an exact approved recurring match, duplicate risk and unsupported treatment stay held.

Remember the context: confirmed answers are saved in shared records. Provisional assumptions stay on the review ledger; silence never teaches a permanent rule. SQLite keeps history; Drive holds shared records and encrypted backups.

Year-end: owner/agent posts approved annual adjustments once; verify carryforward; deliver CPA reports + context brief.
