AI bookkeeper

A visual companion to the executive one-pager

SET UP ONCE

Complete these six stages for each new entity.

1. Interview the owner
Money flows, history and agreed rules

2. Set up Zoho and migrate
Bring missing Wave history across once

3. Connect the sources
Banks, cards, mortgage, rent and receipts

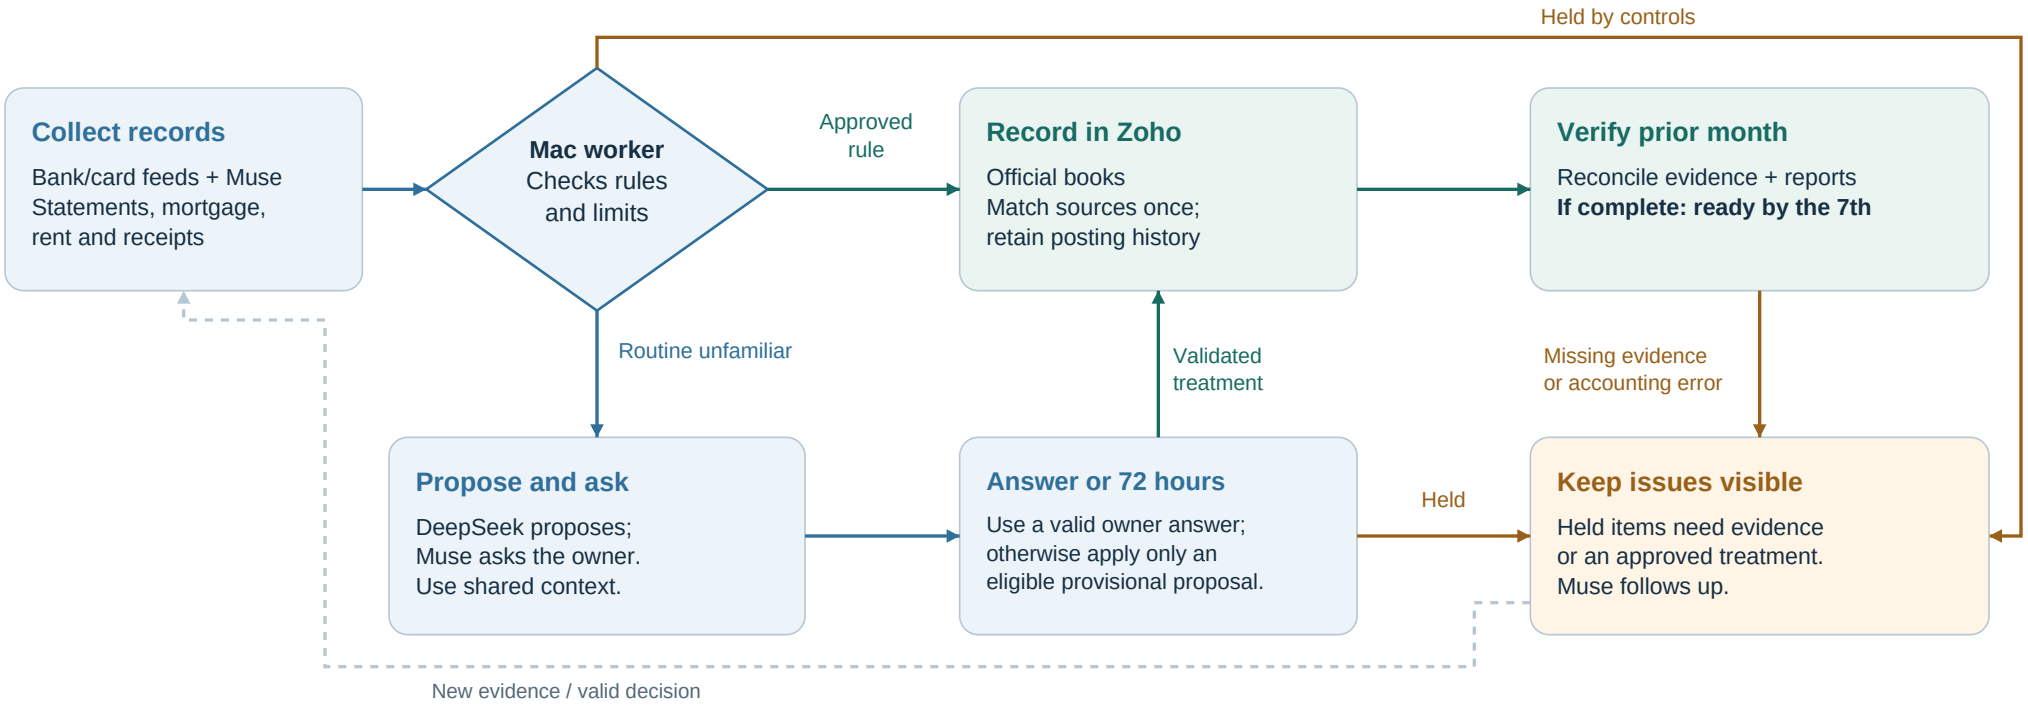
4. Prepare the worker
Mac + SQLite; Drive backup recovery

5. Prove the books
Verify one month; rerun without duplicates

6. Enable the schedule
Observe a run, backup and alert

REPEAT ON SCHEDULE

Daily processing supports a monthly goal: prior month ready by the 7th.



Controls before every posting: over-limit items without an exact approved recurring match, duplicate risk and unsupported treatment stay held.

Remember the context: confirmed answers are saved in shared records. Provisional assumptions stay on the review ledger; silence never teaches a permanent rule. SQLite keeps history; Drive holds shared records and encrypted backups.

Year-end: CPA-agreed report basis + context brief + allocations already applied + approved adjustment reconciliation.
